

environmental policy

Kaolin EAD is a company with a leading position in the industrial minerals sector in Southeast Europe. Our goal is to create assets and value for our employees and shareholders, while at the same time contributing to the prosperity of the local communities in the regions in which we operate. Our main subject of activity is research, development, extraction, processing and production of industrial minerals – kaolin, quartz sand, dolomite, feldspar, limestone, etc. Our company is a key supplier of innovative solutions that are used in the ceramic, glass, paper, construction, foundry, chemical and fodder industries.

The management of Kaolin EAD places the protection of the environment among its main priorities in response to the global tendency of the modern society towards achieving sustainable development.

We realize that:

- Our activities, products and services have an impact on the components of the environment in the areas where the company's sites

are located;

- The potential impact on the environment needs to be assessed before the start of a new activity, during its implementation, as well as after its completion.

- The effective management of the impact of our activities, products and services on the environment is an extremely important element of our corporate social responsibility strategy.

We are committed to adhere to the following main principles:

- Compliance with the applicable regulatory and other requirements in the field of environmental protection;

- Striving to prevent the environmental pollution due to the company's activities, developing the energy efficient production, optimizing the resources used;

- Striving to achieve sustainable development by managing the business processes in an environmentally friendly way;

- Increasing the awareness and commitment of the employees on the issues related to environmental protection;

- Continuous improvement of

our environmental behavior by assessing the effectiveness and applying the best possible practices in accordance with the legal requirements, our financial and technological capabilities, the needs of our customers, the expectations of the public;

- Constant control of the production processes, ensuring timely undertaking of corrective actions;

- Assessment of the possible impacts on the environment before starting new activities or projects in order to achieve a lasting eco-effect of the investment;

- Setting the environmental protection requirements for suppliers, subcontractors and other parties interested;

- Providing resources for maintenance and continuous improvement of the Environmental Management System in accordance with the requirements of ISO 14001: 2015;

- Publicity of the environmental policy and providing information about the significant aspects of the environment from the activity through the Company's website.
